

## Circular Application Pattern Normal

24" DBH Trunk

Inner circle - 5 holes

2nd circle - 10 holes

3rd circle - 9 holes

### **FIGURE 1**

Circular Application Pattern:

Inner Circle: Place 4 – 6 injection holes as close to the root collar as possible (6 – 12" from trunk).

Second Circle: Two feet out from the inner circle. Place injection holes on a 2.5 foot spacing along the perimeter of the circle.

Additional Circles: Add additional circles two feet out from the previous circle until the desired number of injection holes is achieved. Place holes evenly along the perimeter at approximately a 2.5 foot spacing. Spacing may be increased in the outer most circle so that the holes are evenly distributed.
